

PatientPop Telehealth

PatientPop Telehealth is an easy-to-use, secure, and 100% HIPAA-compliant way to deliver quality care virtually. Experience the convenience of being able to treat patients and manage appointment related tasks from anywhere in the world.

Your front office and exam room in the cloud

Our telehealth solution makes it easy for you to manage the most important aspects of your practice from the cloud. Conduct virtual visits with patients from outside your local area, and create digital records with just a few clicks.

Digital patient registration

Patients can submit their id cards, allergies, medications, history etc. prior to their appointment.

Payment collection

Securely collect payments online directly from your patients.

HD 2-way video

See your patients through crystal clear high definition video, as if they were in-person with you.

ePrescribe

Electronically send prescriptions to popular pharmacies.

Electronic charting

Make digital notes and download them along with appointment details and procedural codes.

Chat and photo sharing

Patients can send messages and easily upload photos of their symptoms.

Here's how it works

Appointment setup

Log an appointment with your patient in the telehealth portal.

Digital intake

Patients get a calendar invite and a link to registration forms.

Virtual care

Connect with your patients using HD 2-way video.

Electronic charting

Make notes and you can securely save and download the details.
