MISSION STATEMENT

As the greatest health threat of our time, climate change impacts children and underserved communities most severely. We are pediatricians in AAP’s California Chapter 2 who work to protect and improve the health of children by taking action to mitigate climate change and reduce families’ exposure to its harms. “We will achieve this through education of our community members and fellow pediatricians, research on climate change and environmental health, and advocacy at the local, state, and national levels. To protect our children’s future, we are dedicated to decreasing the pace of climate change and making progress toward a healthier, more equitable society.
